Beyond Additives

PRO 90

Pro 90 is a methacrylic co-polymer with ultra-high molecular weight and excellent compatibility with polar polymer matrices, designed especially for foam applications but can also be used in several different PVC applications.

- Ultra-high molecular weight (up to 10M g/mol)
- Low polydispersity
- Improved melt strength
- Reduced dosages at the same density
- Allows higher thicknesses in foam applications
- High metal release ability
- Solves surface finishing troubles
